SCIENCE

PHYSICS

1. The speed- time graph of a car is given below. The car weighs 1000 kg.

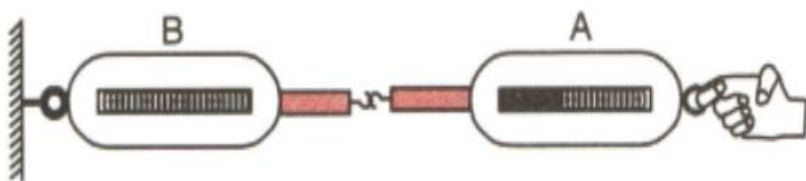

(a) What is the distance travelled by car in first 2 s?

(b) What is the braking force applied at the end of 5 s to bring the car to stop within 1s?

2. According to the third law of motion when we push on an object, the object pushes back on us with an equal and opposite force. If the object is a massive truck parked along the roadside, it will probably not move. A student justifies this by answering that the two opposite and equal forces cancel each other. Comment on this logic and explain why the truck does not move.

3. A motorcar of mass 1200 kg is moving along a straight line with a uniform velocity of 90 km/h. Its velocity is slowed down to 18 km/h in 4s by an unbalanced external force. Calculate the acceleration and change in momentum. Also calculate the magnitude of the force required.

4. Look at the diagram and answer the following questions:

(a) When a force is applied through the free end of the spring balance A, the reading on the spring balance A is 15 g wt. What will be the measure of reading shown by spring balance B?

(b) Write reason for your answer.

(c) Name the force which balance A exerts on balance B and the force of balance B on balance A.

CHEMISTRY

1. A sample of water under study was found to boil at 102°C at normal temperature and atmospheric pressure. Is the water pure? Will this water freeze at 0°C ? Comment.
2. Make a Pictionary of 10 new words related to chemistry from the chapter- 1 and 2 of NCERT and paste pictures related to the topic.
3. 5ml of water was taken in a test tube and china dish separately. These samples were then kept under different conditions as below
 - Both the samples are kept under a fan
 - Both the samples are kept inside a box
 - a) State in which case evaporation will be faster? Give reasons.
 - b) How will the rate of evaporation change if above activity is carried out on a rainy day? Justify.
4. All of us are familiar with LPG cooking gas cylinder used at home.
 - a) What is the full form of L.P.G?
 - b) What is it composed of?
 - c) In what form gas is stored? What are the factors responsible for it?
 - d) What is the change observed when regulator is opened? Why?
5. Why do solids expand a bit on heating and contract a bit on cooling?
